

Project Feedback

Assessment: System Demonstration

Project: Temporal Path Explorer & Visualizer

Group: Group 9

Student: Zixuan Tang, Ankit Ranjan, Bowen Li, Ce Wang, Wenbin Zeng, Xiaohan Xu, Liu Liu

Supervisor: Lutz Oettershagen

Supervisor Grade: A

CATEGORY	A++	A+	A	B	C	D	E+	E- to F-	G
Understanding of the project			X						
Quality of the implementation			X						
Quality of the presentation			X						
Quality of answers to questions			X						

Justification of the mark:

The project demonstrates a clear understanding of the problem and presents a well-implemented solution with solid technical depth. The system design and functionality are coherent, and key concepts such as temporal paths are handled competently. The presentation is structured and communicates the main ideas effectively, while responses to questions show good comprehension, though with some room for deeper critical reflection or extension.

Guidance for the project completion report:

The project completion report should clearly describe the project's objectives, scope, and motivation, providing sufficient context for the work. It should include precise and unambiguous definitions of key concepts such as temporal graphs and temporal walks, ensuring terminology is used consistently throughout. The methodology and design decisions should be explained, including the main algorithms and data structures employed, supported by simple illustrative examples to clarify how temporal paths or walks are constructed and explored. Implementation details should be presented concisely, focusing on the core components rather than low-level code. The report should also include an evaluation of the system using appropriate experiments or use cases, including a brief description of the testing strategy and how correctness and robustness were verified, and conclude with a reflection on limitations alongside suggestions for possible improvements or future work.

Second Marker: Blaine Keetch

Second Marker Grade: A

CATEGORY	A++	A+	A	B	C	D	E+	E- to F-	G
Understanding of the project			X						
Quality of the implementation		X							
Quality of the presentation		X							
Quality of answers to questions		X							

Justification of the mark:

Excellent work. The students have successfully built a tool that can display temporal paths. The tool itself is advanced, and deserving of praise. The delivery of the presentation was high-quality, with confident explanations supplementing the material on the slides.

Guidance for the project completion report:

Make sure the context on temporal graphs and visualising paths is stated in detail for the background section. The context of why you've built this tool matters, and as someone who knows what a temporal graph is, but doesn't actively research them, the context as to why visualising paths in temporal graphs is important.
